TeleNav (\$9.99 per month) Turns your device into a GPS tracker and ATM tracker, among other things. More predictions about the future of mobile devices coming out of the MobileBeat Conference in San Francisco. Ilya Laurs, head of GetJar - a mobile app store that boasts 14 million monthly downloads - recently said mobile apps would be bigger if not bigger than the Internet, according to the BBC. That statement is in stark contrast to last week's statement by Google's vice president of engineering, Vic Gundotra, who said it was not the app, but the browser that would be the future application platform for mobile devices. Laurs believes the popularity of the app will peak in 2020 with about 10 million apps available worldwide. After 2020, the popularity of mobile applications will decrease significantly. But Gundotra says the myth of the mobile platforms available will become too expensive for companies to develop a separate application for each operating system. The alternative, Gundotra says, is that building apps for mobile browsers is still fledgling. Sounds to me like a fight is brewing on how you will use your mobile device in the future. In one corner you have Apple, GetJar, and most other companies backing download apps; and in another, the mighty Google claims the Web is the future of just about everything. Downloadable AppApple has turned the mobile industry to the fore with the iPhone and the company has been even more successful with the release of iPhone OS 2.0 and the App Store in iTunes. Today, the iPhone is becoming a platform for everything including games, social networks, step-by-step directors, e-reading and news updates. Apple recently announced that iPhone customers have downloaded more than 1.5 billion apps from a library of more than 65,000 titles in the app store. Based on Apple's success, practically every major handsets manufacturer has jumped into the app store bandwagon, with online retail stores open for Blackberry, Nokia, Palm, Windows Mobile and even Google's Android handsets. But the downloadable model has an organic problem. Apple has been accused of repeatedly having bizarre and ines comprehensible policies about the approval process for third-party developers. Budding programming designs for iPhone and other devices are also finding it difficult make a profit from their applications. Multiple times, one will gain traction with the public, but then die off as other exciting apps replace them. Speaking to the BBC, Laurs said this was an issue that was organic to all app stores and about 90 per cent of all developers suffered failures. However, Laurs also said those app developers who still stand will have a highly profitable business. Mobile web apps While Apple has the download market cornered, Google is working hard to capitalize on the growing importance of the Internet. The company recently announcedArtwork: Chip Taylorced its cloud operating system, Chrome OS, as a Google Chrome tracker, its problematic attempt to revolutionize traditional Web browsers. The Internet block started with a simple search box is now going to service to millions of people around the world with online services including e-mail, office document software, an RSS catcher, social networking, video streaming, news gathering, blogging, and dates and dates. With such an overwhelming online presence, it is clear why Google wants the Web to be the future of mobile devices. However, the problem with accessing apps through your browser is that they become useless when you lose your Internet connection. The future may point to a day when every square inch of the United States is covered by some kind of wireless connection, but as InfoWorld's Bill Snyder recently pointed out, it's hard to find a good signal in San Francisco or New York, never mind trying to access your Gmail while you're traveling on the Wyoming or Nevada deserts. Mobile Internet services are not ready for Google's revolution. In theory, browser-based apps are a nice idea and Google's dream may be inevitable, but now I bet most of us don't want our phones locking us out of our music, games or other content every time we drop our Internet connection. What about you? Are you happy with your downloaded content or are you willing to give up your mobile apps for Google's cloud? Note: When you make a purchase after clicking on the link in our article, we may earn a small commission. Read our affiliate policy for more details. Company: TripIt Inc. Yes, text bAPP to DISCOV (347268) and you'll get a download link. Was this content helpful to you? A quality mobile accounting and accounting application is essential for small business owners today. Fortunately, most online accounting programs offer one application, but the functions and quality of the applications vary, so you should consider your mobile application needs before deciding on accounting software or ledgers. We've studied applications from many of the top names in accounting software to help you find the app that best suits your small business Best Accounting and Accounting App QuickBooks Online: The best overall mobile accounting app QuickBooks Online, our choice for the best small business accounting software, offers an outstanding mobile application to harness the industry's leading power. The layout is similar to the online dashboard, with most transactions easily starting with clicking the plus button. Access to the app is included in your QuickBooks Online subscription, you, during your 30-day free trial period. The Features We Like QuickBooks Mobile App offer nearly every function available in the online interface. You can issue invoices, receive payments, 30 bank transactions, review reports, pay invoices, deposit checks, and more. The overview provides an instant view of profits and losses, outstanding invoices, recent cost analysis, and your bank account balance. In addition, the app offers functions that are not available in the online interface such as scanning receipts and tracking GPS mileage. QuickBooks Self-Employed: Best Mobile App for Freelancers QuickBooks Self-Employed is a unique version of QuickBooks Online designed specifically for freelancers and other self-employed taxpayers who report their income on Schedule C of their personal profits. QuickBooks Self-Employed is not compatible with other versions of QuickBooks Online and has its own mobile app that allows insizing, tracking mileage, scanning receipts, and more. You can rate the app with a 30-day free trial for QuickBooks Self-Employed. The We Like Self-Made QuickBooks feature is a scaled-down version of QuickBooks Online that focuses on income and expenses instead of also tracking assets and liabl liabilities. QuickBooks self-help mobile app is simple, providing essential features for freelancers, including issue invoices, mileage tracking, scanning receipts, and sorting transactions imported from bank accounts. Probably best of all, with your data self-help tax package that can be automatically transferred to your tax return later this year. Sage Accounting: Best for a large mobile sales force using Apple Sage devices (formerly Peachtree Accounting) has been in the accounting industry for a long time and has developed Sage Accounting as a great accounting alternative for small businesses looking for a more affordable option. Its mobile application is similar to the program itself in that it provides an easy way to perform basic accounting tasks but lacks the more advanced features of some competitors. Unfortunately, the Android app is poorly reviewed, with users reporting many technical issues that do not seem to affect the Apple version. You can rate the app during Sage Accounting's free 30-day trial period. Features We Like With Unlimited Users. Sage Accounting is perfect for companies with large sales forces that need to issue invoices, prices, estimates, and receipts in this area. The app also allows users to manage providers, enter invoices, and pay. While the app is simple to use, it lacks more advanced features such as GPS tracking and report viewing. Users can attach images of receipts to transactions, which is great for saving records, but receipt data is not extracted and cannot be used to create transactions. Zoho Invoices: Best for a Mobile Zoho Bill provides an app for your mobile workforce to track and specify their hours for customers and projects on the go. Zoho Invoice integrates with The entire application from Zoho can be used to manage your entire business, including Zoho Books, which is a comprehensive accounting system. You can try Zoho Invoices for free for up to five customers and one user. The We Like Zoho Invoice feature allows your mobile workforce to record their hours in the mobile app. They can also specify their hours and costs to the client or project. App admin users are allowed to record business hours for other employees, allowing managers or supervisors to record hours for the entire crew. In addition to recording time, Zoho Invoice is a great app for customizing, sending, and tracking invoices. However, it is not a complete accounting system unless you integrate it with Zoho Books, which requires additional registration. Wave: Best free mobile billing and get ScanNed Apps Wave is excellent free accounting software. Although its applications are not as comprehensive as most paid software, Wave has one app for instinging and another for scanning receipts. Both apps connect to your Wave online ledger account. Waves are free forever, so give it a try. The We Like Wave Invoicing feature is highly appreciated by both Apple and Android users. While the application is limited to insa setup, the ins invoice function is very thorough. You can customize invoices, upload logos, set payment options, and email invoices directly from the app. Wave's receipts have very limited functionality, but it's extremely easy to use. All you do is take a picture of your receipt and tap send. The receipt will be sent to your Wave online account, where it will create a new transaction that you can consider next time you log in. Wave receipts are not available in the Google Play store, but you can download the Android app directly from Wave. How to choose your accounting app or ledger Most accounting applications don't allow you to perform all accounting functions from the mobile app. Things like bank mediation and magazine entries are generally done in no ordinary and much easier on a larger screen. However, when choosing your app, think about the types of everyday things you should allow. A good mobile accounting app will allow you to: Issue invoices: You'll be able to create and email invoices quickly to customers. Get paid: You can record payments received from customers and apply them to invoices that haven't been paid. Pay your bills: Importing invoices you receive may be easier on your PC, but you'll be able to pay your invoices through the mobile app. Mileage tracking: A good app will automatically track your mileage using GPS from your mobile device. Scan receipts: Many apps will allow you to scan receipts and then extract to create new accounting transactions. For more information, read our guide. The Best Receipt Scanner App. Transaction classification: Good accounting programs will automatically transfer transactions from your checking account. The mobile app will allow you to these transactions. View reports: A good app will allow you to view financial reports without printing them. Bottom line We've provided a list of the best mobile accounting apps to help your small business succeed. Before choosing your accounting software, be sure to consider what functions, such as instaling, you'll want to do directly from the App. If you want to perform most accounting functions along the way, QuickBooks Online may be your best choice. Choice.
